

911 Service Request Form

All Voice over IP (VoIP) based phone services have a number of constraints that the user needs to be aware of, specifically:

- The service relies upon an adequate connection to the Internet. If this fails or is deficient then the call will fail. The connection to the Internet is the responsibility of the user's internet service provider (ISP) and is outside of the control of Bluestone.
- Unlike traditional copper connections where a phone line could be tied to a postal address, with VoIP no such connection exists. It is the responsibility of the user to supply and maintain accurate address information associated with the registered phone number(s).

Enter the address and phone number for emergency services registration:

Phone Number	Full Postal Address

By signing this form you understand the above constraints and limitations.

Name

Title
